

ACHIEVE YOUR SUSTAINABILITY GOALS WITH LIGHTING SOLUTIONS

Converting your facility lighting to LED technology takes time and resources to successfully implement. The cost efficiencies, carbon footprint reduction, safety improvements, and further benefits of sustainability can have a significant impact on your operations.

Our turnkey lighting solution maximizes the economic and environmental advantages of an LED retrofit. The comprehensive, partner-driven program generates significant and immediate cost savings and proven ROI by blending a professional energy service company with ATS' extensive supply chain network, and the latest technology.

Following an initial walkthrough and evaluation, lighting specialists develop customized CAD drawings, identify utility rebates and tax benefits for energy savings, design the optimal solution with provable ROI, and complete the installation with a full team of expert technicians. ATS works closely with the service provider to ensure timely acquisition of the best-in-class materials, including the fixtures, ballasts, lamps, controls, and more.

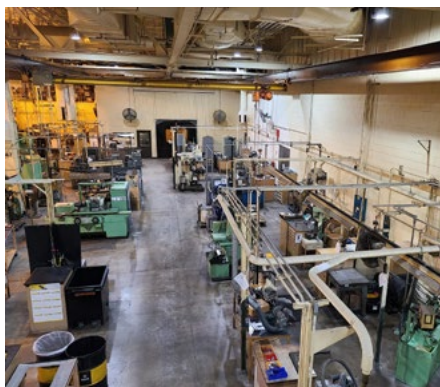

Substantial energy and cost savings begin immediately and are substantial. In addition to slashing energy consumption, lighting materials and maintenance costs are virtually eliminated for 10-15 years due to the long life of energy efficient lighting.

Choosing our complete lighting solution eases the burden of achieving energy and sustainability goals. Contact us to learn more about ATS lighting solution.
